

Stock Replenishment Policy

Purpose: Defines general rules for identifying and responding to inventory replenishment requirements.

Low Stock Identification

A product is considered a replenishment candidate when its available quantity falls below the configured reorder level.

Review

Low-stock products should be reviewed for demand, supplier availability, lead time, and business priority.

Supplier Consideration

The procurement process should consider suitable suppliers and product availability.

Escalation

Critical shortages or risks to important operations should be escalated.

Documentation

Replenishment decisions and exceptions should be documented where required.
